Forest Land Use

ONF INTERNATIONAL, INDONESIA

Earth Observation and GIS communities fighting the climate crisis

SPOT5, Indonesia - 2007

Why

Indonesia has the third largest tropical forest in the world but is also the fastest deforested one. The high pressure on forested lands send a big amount of CO2 emissions and influence Climate Change.

What for

- Build the capacity of local authorities on forest resources management and monitoring.
- Enhance REDD related knowledge and capacity of Indonesian parties.

Results

- KPH Poigar REDD project is actually under development and aims to preserve 35.000 ha of forest with a strong involvement of local communities.

Where

Indonesia: North Sulawesi

Who

Team

- Green Synergie
- Department of forest
- Department of provincial planning
- Local office of National Ministry of Forestry
- University of Manado
